

Seeing through the Vapor

e-cigs • e-cigars • e-hookah • e-joints • e-pens • e-pipes • tank systems • hookah pens • vape-pens • vape-pipes • vaporizers • MODs • tanks • electronic nicotine delivery device

Whatever you call them, don't call them safe

You might think vaping is "safe" because there's no tobacco. Unfortunately, we don't know that for a fact. E-cigarettes can still be highly addictive, and you never know exactly what you're vaping.

There can be a whole lot more than water in that vapor ...

Including nicotine and a lot of the same chemicals found in old-fashioned, deadly cigarettes...

like **Formaldehyde** also found in **dead** people

You'd be surprised how many different chemicals have been found in vapor.

or **Arsenic** like in **BUG** spray

Here's another one: **Rubidium** You might know it as the stuff that makes **fireworks** turn purple

and **Cadmium** in **batteries**

E-cigarettes: the big  When tobacco cigarettes first came out, everyone thought they were pretty safe too.

Whoops!
