

MEMORANDUM

To: Jenna Kay, Planner II/Shoreline Master Program Coordinator
From: Brent Davis, Wetland and Habitat Review Manager/Shoreline Administrator *BD*
Date: January 16, 2019
Subject: REVISED Proposed Shoreline Map Amendments for Plas Newydd Farm

I have reviewed the documents and map data provided by Plas Newydd Farm, LLC to support Shoreline Map Amendments for their properties based on site specific data and analysis. This review includes the following documents and GIS data:

- Draft Plas Newydd Farm OHWM Determination;
- OHWM boundaries derived from site specific LIDAR topographic data;
- Final Wetland Delineation Report for the Wapato Valley Conservation and Wetland Bank;
- Wetland unit boundaries derived from site specific LIDAR topographic data; and
- Mapping of the Flood Hazard Area (100-year floodplain) derived application of USACE flood frequency data at river mile 87 on the Columbia River to site specific LIDAR topographic data.

I have been to the site numerous times in the last 4 years and have previously reviewed the wetland and flood hazard mapping as part of the Inter-agency Review Team (IRT) for the Wapato Valley Conservation and Wetland Bank, co-chaired by the Washington Department of Ecology and the Seattle District of the US Army Corps of Engineers. I have concluded that it is appropriate to use the land owner's analysis and findings to update the county's Shoreline Map as requested.

I have also processed the mapping data provided into an amendment of the Shoreline Management Area map for the site and attached a set of Figures that show where the data warrants removals and additions to the SMA as well as changes to the mapped Shoreline Designations based on the OHWM provided.

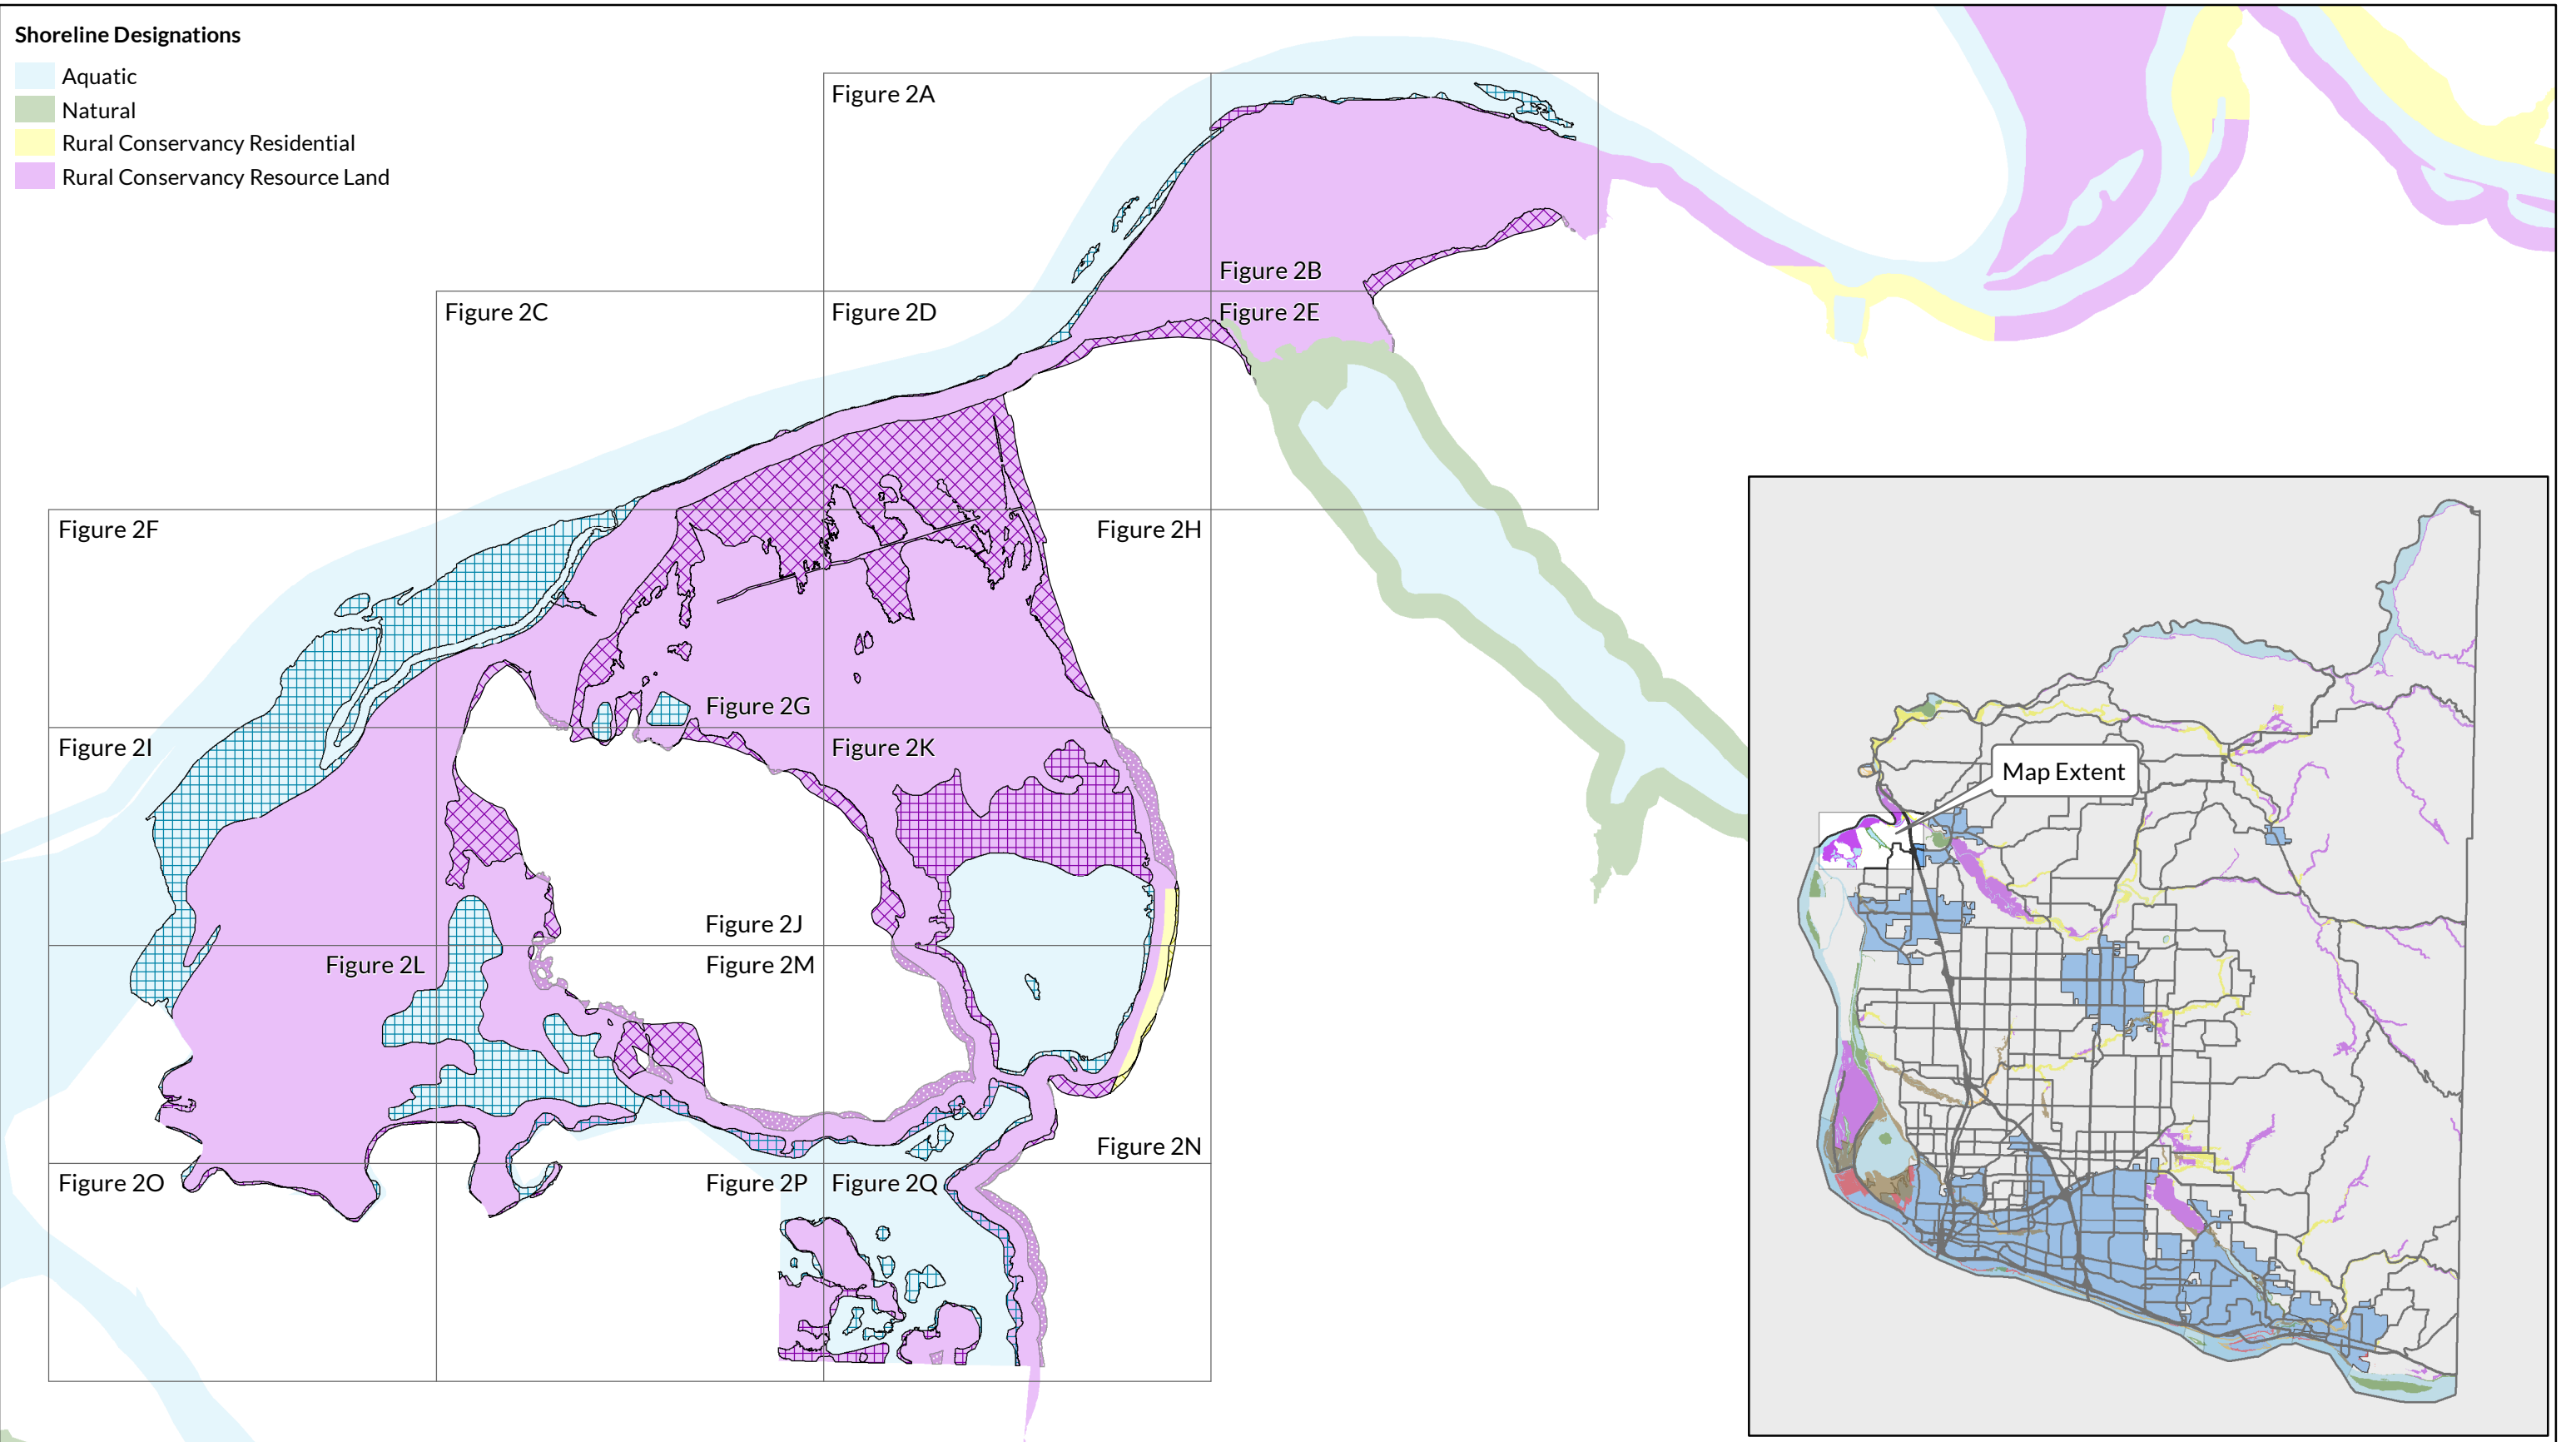

Some additional work may be required to reconcile these map changes with existing mapping on adjacent properties.

Site Specific Determination of the Shoreline Management Area Required

Adoption of the OHWM, wetland, and Flood Hazard Area boundaries provided for this map update does not revise critical areas maps adopted or maintained under the Growth Management Act or replace site specific determinations of the extent of the Shoreline Management Area and boundaries between mapped Shoreline Designations for future Shoreline Permit or Statement of Exemption applications.

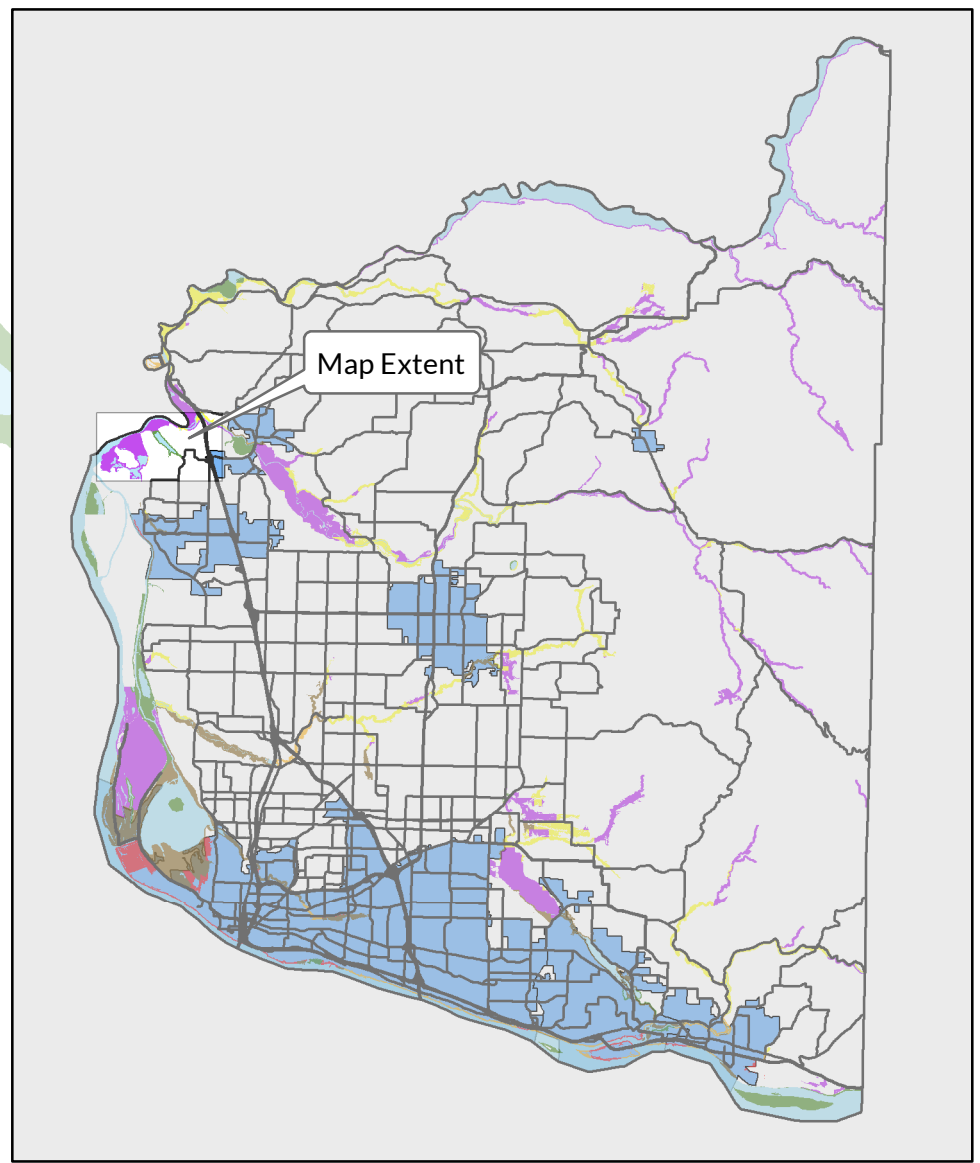

The Shoreline Administrator will not rely solely on the adopted Shoreline Map in administration of the Shoreline Master Program and will field verify site specific conditions at the time of any future application pursuant to 40.460.440.D.4.

Shapefile

Tags

Flood, 100, year, flood zone

Summary

This shapefile delineates those areas on the PN Farm property falling below 26.54 NAVD 88 that are not protected by levees or dikes.

Description

100 year flood zone calculated from the USACE flood frequencies for RM 87 on the Columbia River.
