

## Clark County Jail Master Plan Options

**Presented by:**

Chuck Atkins, Sheriff

Ric Bishop, Chief Deputy

DLR Group, Architecture Engineering Planning Interiors

Introduction  
Sheriff Atkins

Re-Entry  
Chief Bishop

DLR Group

## Re-Entry by the Numbers

In 2014; 560 inmates participated in Reentry  
- Of those, 244 were reincarcerated in 2015  
= 316 program participants did not return in 2015,  
or a 44% reincarceration rate.

Of the 244 Who were reincarcerated, the numbers of bookings in 2015 actually increased by 6.5% (650/692)

That said, the reasons for incarceration changed:

Administrative Sanction	78.9% increase (261/467)
New B Felony	31.9% decrease (94/64)
New C Felony	29.8% decrease (235/165)
New Gross Misdemeanor	20.0% decrease (641/513)
New Misdemeanor	28.5% decrease (347/248)

## Re-Entry

Our program is small and still developing, but...

Clark County's preliminary results resemble the findings of Maricopa County, AZ who experienced a 90% reduction in probation absconders and a 29% decrease in new felony convictions after implementing a DOJ funded post-prison re-entry initiative (Rogers 2016).

*Rogers, D., (2016). Probation and Parole Reform. Corrections Forum 25(4), 30-38.*

## Master Plan Process

- Projected Beds vs Planned Beds
- 3 Dimensional Operation Flows
- Integration of Justice Needs
- Site Constraints
- Urban Design Approach
- Future “Proofing”
- Community Based Solutions

## Jail Capacity Needs

Current Capacity – 793 beds with 120 closed beds

Need the right beds in the right location

Calculation Method	Offender Population	Bed Need	Design/Estimating Range
Method I	1,050	1,260	1,197 – 1,323
Method II	1,367	1,640	1,558 – 1,722
Method III	924	1,109	1,054 – 1,165

Note: Projections are to year 2036

## Classification Types

Medium (levels 4-5-6)

Maximum (levels 7-8-9)

Assessment (levels TBD)

Medical (all levels)

ATR (Adult Transition & Reentry: levels 1-2-3)

# Incarceration Rates

### Needs Assessment

### Existing Jail Facilities

## Space Needs Assessment

## Trends in 21<sup>st</sup> Century Jails

- Direct Supervision
- Natural Daylight
- Normative/less institutional colors and furniture
- PREA compliance
- Suicide mitigation (physical plant)
- Suicide mitigation (programs and services)
- Smaller housing pods
- Mixed personal visitation modes (non-contact, video, phone)
- Mixed professional visitation modes (non-contact, video, phone)
- Appropriate number of single cells (at least 10%)
- Appropriate number of cells for classification and peaking
- Intake services include medical and mental health screenings
- Assessment process for appropriate classification
- Special needs offender management other than solitary confinement
- Officer training program – appropriate space to provide classroom and physical training
- Outcome accountability
- Program availability and meaningfulness
- Reentry programs - Meaningful community services connections developed during reentry programming
- Leveraging technology appropriately
- Best Practice Based Operational policies and metrics
- Triage & diversion of low level offenders who are mentally ill and/or chemically dependent to appropriate care facilities.

## Master Plan Study 1

Renovate Existing to Housing & Admin

### Bed Count

Jail	234
JWC	200
<b>Total</b>	<b>434</b>

### Project Cost Range

\$63 - \$67 Million

**Plus Construction Duration Bed Rental Cost of \$24 Million**

## Summary

### Pros

- Interior renovation of existing housing units to support current operational model means upgrading housing units will be safer and will support operational best practices.
- Interior renovation of administrative spaces and mechanical, electrical, security, and plumbing systems will remedy existing building deficiencies.
- Because full program requirements are not being met by project scope, this is the least cost Master Plan approach.

### Cons

- Does not provide adequate space for LEC program requirements
  - Jail bed count below program requirements
  - Intake & release space inadequate for efficient operations
  - Administrative space requirements not met
- Existing building geometry forces inefficient operational layout
- Administrative spaces located below jail housing units create substandard working conditions and challenging maintenance issues.
- JWC functions will not be relocated to LEC campus – operationally inefficient and not freeing up prime development land on the river.

Renovate Existing to Housing, Build New to Meet Space Needs

### Bed Count

Jail	609
ATR	288
<b>Total</b>	<b>897</b>

### Project Cost Range

\$253 - \$268 Million

## Summary

### Pros

- Interior renovation of existing housing units to support current operational model means upgrading housing units will be safer and will support operational best practices.
- Interior renovation of administrative spaces and mechanical, electrical, security, and plumbing systems will remedy existing building deficiencies.
- New administration space separate from the jail housing functions will be efficient and right sized for the admin program requirements.
- Master Plan meets most program requirements including jail bed count, and relocation of JWC to LEC campus
- Jail industries on-site and connected to functions served.
- Community service program are provides spaces and programs needed to support transient populations.
- Secure LEC parking addresses staff safety issues.
- Allows for future expansion of jail housing.

### Cons

- Renovated existing building for jail housing along with new construction jail housing results in multiple housing unit layouts and circulation inefficiencies.
  - Adds operational complexity and risk
  - Creates significantly higher staffing requirements
- Existing building geometry forces inefficient jail housing operational layout.
- Locating administrative functions in new construction north of existing building displaces valuable parking.
- Not able to add court functions to existing building if it is developed for jail housing functions.
- Level 0 is unusable for housing. Administrative functions located on level 0 are compromised by having jail housing above and by circulation and access inefficiencies.

### Bed Count

Jail	740
<u>ATR</u>	<u>288</u>
Total	1,028

### Project Cost Range

\$268 - \$284 Million

## Summary

### Pros

- Interior renovation of existing housing units to support current operational model means upgrading housing units will be safer and will support operational best practices.
- Interior renovation of administrative spaces and mechanical, electrical, security, and plumbing systems will remedy existing building deficiencies.
- Renovation of the existing building for administrative space separate from the jail housing functions will be efficient and right-sized for the admin program requirement.
- Master Plan meets or exceeds program requirements including jail bed count, all jail operations, consolidation of community based corrections, relocation of JWC functions to LEC campus, and expanded court functions.
- Secure LEC outdoor service court provides loading/unloading, emergency evacuation, and secure transfer between intake and ATR.

- Jail industries on-site and connected to functions served.
- Community service program area provides spaces and programs needed to support transient populations.
- Secure LEC parking addresses staff safety issues.
- Preserve valuable public parking north of existing LEC.
- Allows for future expansion of jail housing.
- Most efficient use of site and existing building for program functions
- Least impact to construction and occupation phasing.

### Cons

- Public perception that repurposing the existing jail to administrative function is not taking advantage of existing “security” construction type.
